UMUT ÇALIKUŞU

Full Stack Developer | umut54709@gmail.com | Türkiye | linkedin.com/in/umut-çalıkuşu

Computer Engineer and Software Developer with production experience across Türk Telekom and Ziraat Katılım Bank projects. Experienced in .NET, C#, React, Vue.js, JavaScript and SQL, with hands-on work in enterprise web services, microservices, REST/SOAP integrations, Oracle PL/SQL, Microsoft SQL Server, testing and SDLC processes.

PROFESSIONAL EXPERIENCE

Full Stack Developer, Techne Bilişim (Outsourced to Ziraat Katılım) 07/2025 – Present

• Develop and maintain payment system components for FİNART, supporting the INTERVISION application used by Ziraat Katılım for banking operations.

• Develop backend services and business logic using .NET, while building frontend components with React within the FİNART ecosystem

• Work with PL/SQL for database operations, complex queries, and business-oriented data processing within FİNART.

• Develop and maintain INTERVISION components using .NET, JavaScript, and customized enterprise JavaScript libraries, with MS SQL Server as the primary database technology.

• Analyze and resolve application defects and technical issues across backend, frontend, and database layers, ensuring reliable payment-system workflows.

• Perform integration and functional testing, investigate service and data-related issues, and collaborate with development and testing teams throughout the software lifecycle.

Full Stack Developer, Techne Bilişim (Outsourced to Türk Telekom) 08/2024 – Present

• Develop and maintain Legal Inquiry applications that process user-provided information, determine the appropriate inquiry type, and integrate with relevant Türk Telekom services to retrieve and present results to users in a structured report format.

• Develop backend services using .NET / ASP.NET Core and build user-facing interfaces with Vue.js, implementing end-to-end data flow between the application and external telecom services.

• Integrate and manage BCSC and Opera services through SOAP and RESTful APIs, including request/response handling, data transformation, and service integration workflows.

• Work with Oracle SQL for data querying and management, while using Swagger UI and SoapUI for API inspection, endpoint validation, and service testing.

• Investigate, implement, and resolve a wide range of functional defects, technical issues, and change requests, contributing to the stability and continuous improvement of the Legal Inquiry platform.

• Perform functional, integration, UAT, and production-level testing and debugging, analyzing issues across frontend, backend, database, and external service integrations.

• Analyze Business Requirement Documents (BRDs) and translate business requirements into technical and functional specifications, supporting communication between business, development, and testing teams.

Techne Bilişim — Software Developer Intern 01/2024 – 07/2024

Fimple Banks Project: resolved frontend issues, analyzed user-uploaded documents and prepared daily technical reports.

Software Department Captain Konya Technical University Armas Team 08/2022 – 05/2023

Led the software team in developing interface and image-processing solutions for an autonomous agricultural vehicle, including plant detection capabilities and the preparation of technical design documentation.

Team Member Konya Technical University Yazgit Eternal Team 08/2021 – 06/2022

Contributed to the development of AI-based transportation solutions by researching suitable algorithms, preparing preliminary/critical design reports, and training datasets according to competition requirements.

ACADEMIC PROJECTS

Visual Inertial Odometry — Graduation Project

Technologies: Python, PyTorch, Computer Vision, Machine Learning, IMU, Camera Data, Deep Learning

Developed a visual-inertial positioning system that combines camera and IMU data to estimate vehicle motion and position without relying on GPS.

Agricultural Unmanned Ground Vehicle (ARMAS)

Technologies: Python, Image Processing, Computer Vision, OpenCV

Developed interface and image-processing components for an autonomous agricultural ground vehicle, supporting visual data analysis and vehicle-related operations.

YOLO-Based Object Detection

Technologies: Python, YOLO, OpenCV, Deep Learning, Computer Vision

Developed an object detection system using YOLO to identify and classify vehicles and other objects from image/video data.

EDUCATION

Konya Technical University — B.Sc. in Computer Engineering 2021 – 2025

Relevant Courses: React Web Programming (BTK Academy); Object Recognition with YOLOv4 (Udemy) Image Processing with Deep Learning (DATAI TEAM); Cyber Security 101 (Cisco-Akbank); Occupational Health and Safety Training (İŞKUR);

English — B1 (Intermediate)

TECHNICAL SKILLS

Programming: Python, C, JavaScript, TypeScript, SQL

Frontend: React, Vue.js, HTML5, CSS3

Backend: ASP.NET Core, Node.js, Hibernate

Databases: PostgreSQL, MySQL, MongoDB

DevOps & Tools: Docker, Git, GitHub, Linux, Swagger/OpenAPI, SoapUI, Trello

Backend & Architecture: RESTful API, JWT Authentication, CRUD, Microservices, SDLC

AI & Computer Vision: Machine Learning, YOLO, Image Processing
